

## NEW MOISTURE CONTROL FOR PSM TUMBLER DRYERS

---

This document is to inform you that the **NEW Humidity Control** is already available as a supplement for all dryer's range with PSM microprocessor.

It doesn't need any auxiliary display, it is shown in the PSM microprocessor. It is programmable itself without no need of extra software.

There is a new special kit in order to adapt all dryers to the new humidity control. The reference is 8V000092 and it is thought for those dryers with software versions before 151.

## NEW MOISTURE CONTROL FOR PSM TUMBLER DRYERS

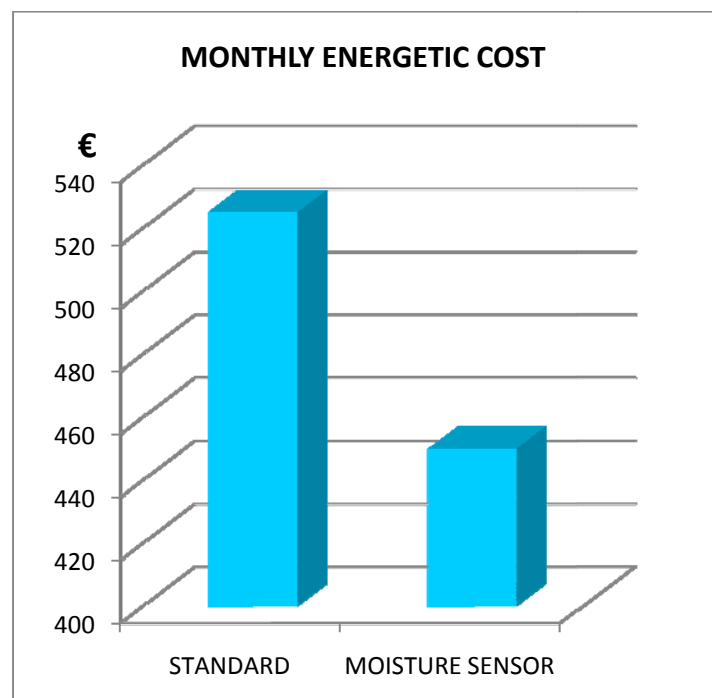

---

### ADVANTAGES:

1. Good opportunity of increasing the efficiency of your dryers by an environmental friendly system.
2. You will reach the desired humidity level reducing to the limit the energy consumption.
3. Adjusts automatically the time of cycles depending on the type of fabric or load.
4. It is a great solution for preventing clothes from overheating and for those interested in getting different gradation of humidity for later processes.

Get the most ECONOMICAL ADVANTAGES thanks to this optimized sensor.

Please, have a look to the following example comparing the energetic cost per month for a standard dryer (DTP-26) versus the same machine with humidity sensor.

## NEW MOISTURE CONTROL FOR PSM TUMBLER DRYERS

Note the short payback period of the investment and the economical saving you got through different months.
